

Field Trial: EcoFungi – Field Trial with Roses

Product:	EcoFungi	Product Type:	Mycorrhizal Inoculant
Crop:	Roses	Location:	N/a

Rose plants were planted in an open field of a commercial plantation under two different treatments.

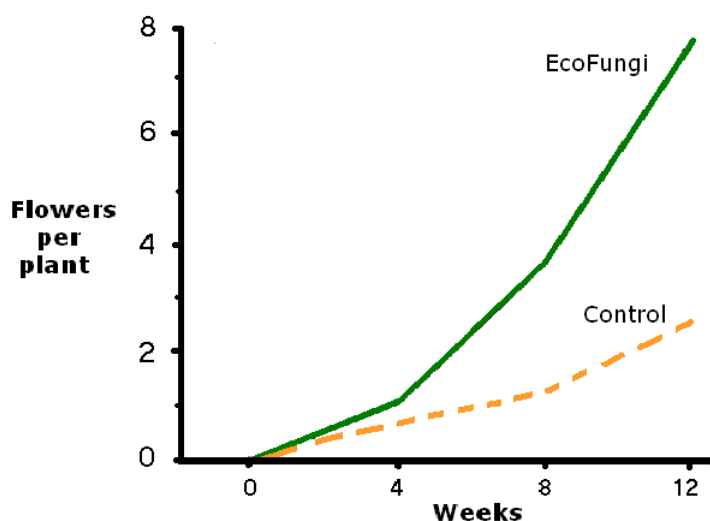

Control treatment: Traditional methods for the commercial production of roses were used.

EcoFungi treatment: same methods of culture were used for this treatment as the control treatment, except that the plants were inoculated with EcoFungi at a dose rate of 0.1 grams per plant prior to planting.

Production of flowers under both treatments was evaluated for a period of twelve weeks.

Results:

The graph below shows the production of flowers per plant under both treatments.
